What Algolog needs from AiMP to take WorkingForGod.org live

Client: AiMP (Apostles In The Marketplace) Network

Prepared by: Algolog Limited

These items are not required to begin the project — development commences once the Agreement is signed. This document lists what we need from AiMP in order to take the platform live.

1. Domains & Accounts

- **WorkingForGod.org — already purchased by AiMP.** We need access to manage and point it to the new platform: the **registrar login (or DNS delegation)** for the domain you bought. Please confirm which registrar/provider was used and share the access details.
 - **ethicalleadershipinstitute.org (Ethical Leadership Institute) — the second front-end URL.** We need access to this one as well: confirm whether it has been purchased and share the **registrar login (or DNS delegation)**. If it has not yet been purchased, authorise Algolog to register it and provide access once available.
 - **AiMP Network YouTube channel** link + specific videos/playlists to embed
 - Email/SMTP details for transactional emails (receipts, notifications) — or authorise Algolog to provision
-

2. Content

Per **course**:

- Final or near-final video files
- Title, description, category (Leadership, Integrity, Business Ethics, etc.)
- Segment/chapter breakdown
- Reflection / discussion questions per segment
- Downloadable resources (PDF guides, scripture references)

Per **speaker / leader**:

- Name, title, short bio, high-resolution headshot, associated courses, brief faith journey/testimony

Articles / Fresh Perspectives & Power Reads: text, images, categories

Faithful Success Stories: testimonials — name, role, quote, optional photo

About Us: vision, mission, guiding scriptures, narrative

Events & Speakers: any launch-time events to feature

Pricing inputs: individual monthly/yearly amounts; organization tier structure + seat pricing; what the free tier includes

3. Payments

- Settlement bank account details (where subscription payments are paid out)
 - Tax/VAT treatment, if any, to apply to subscriptions
-

4. Decisions to Confirm

1. **Free tier** — exactly what is free vs paid
 2. **Domain access** — registrar/credentials for the already-purchased WorkingForGod.org domain
-

5. What Algolog Handles

- Full design and development of both front-ends on one shared backend
 - Cloud setup, security, and deployment
 - Payment integration, CMS, user/role management
 - Staff training, comprehensive manual, and handover — full source code, no vendor lock-in
 - Free lifelong support within the agreed scope; no maintenance fees
-

6. Next Actions for AiMP

1. Sign the agreement to lock deliverables.
2. Confirm the decisions in Section 4 and share the WorkingForGod.org domain access (Section 1).
3. Begin assembling and sharing content (Section 2).
