DeepThread

Instant Standups & Handoffs from GitHub, Slack, Jira

deepthread.ai

THE PROBLEM

Software teams waste hours every week writing standup reports, searching for context across 5–7 tools, and creating handoff documents. Information gets lost between Slack threads, Jira tickets, and GitHub PRs. Remote work is harder than it needs to be.

WHY IT MATTERS

1. **10-Second Standups**
   Generated automatically from your connected tools. No more writing reports manually.
2. **Full Context, No Digging**
   AI follows links between platforms and builds complete context automatically.
3. **Seamless Handoffs**
   Transition documents generated with one click. Nothing falls through the cracks.
4. **Zero Manual Reporting**
   AI does the summarizing so your team can focus on building.
5. **7 Platform Integrations**
   GitHub, Slack, Jira, Linear, Confluence, Notion, Google Docs — all connected.

HOW IT WORKS

1. **Connect Your Tools**
   Link GitHub, Slack, Jira, Linear, Confluence, Notion, and Google Docs.
2. **AI Builds Context**
   DeepThread's AI follows cross-platform links and assembles full context automatically.
3. **Generate Reports**
   Create instant standups, handoff documents, or issue summaries with one click.
4. **Work Async Better**
   Your team stays aligned with zero manual reporting effort.

Feature Breakdown & Details

deepthread.ai

FEATURES

Cross-Platform Context Engine
Follows links between platforms to provide full context, not fragments. One connected view.

Instant Standup Generation
AI generates standup reports from your tools in seconds. What used to take 10 minutes takes 10 seconds.

Handoff Document Creation
Seamless transition docs for team changes, project handoffs, and knowledge transfer.

Issue Summaries
AI-summarized context for any issue, ticket, or PR — pulled from across all connected platforms.

Workflow Automation
Integrate CRMs, ERPs, and productivity tools with custom automated workflows.

No-Code Integrations
Uses Make, Airtable, and Zapier for rapid deployment and customization.

Predictive Automation
Anticipates needs based on patterns in your team's activity across platforms.

Multi-Platform Search
Search across all connected tools from one interface. Find anything, anywhere, instantly.

WHO IT'S FOR

- Software development teams tired of manual reporting
- Product managers juggling context across multiple tools
- Engineering leads who need visibility without micromanaging
- Remote teams losing alignment due to fragmented communication
- CTOs looking to improve developer productivity
