PrivateTransfer

Secure Transfers You Can Trust

privatetransfer.ng

THE PROBLEM

Businesses and individuals need to transfer sensitive files and financial data, but standard channels lack encryption and privacy guarantees. Data breaches and interception risks are growing across Africa. Your most important transfers deserve purpose-built security.

WHY IT MATTERS

1. **End-to-End Encryption**
   Every transfer is protected from sender to receiver. No intermediary can access your data in transit.
2. **Privacy by Design**
   No data stored longer than necessary. Your transfers are yours — we don't keep copies.
3. **Built for African Businesses**
   Designed for local compliance requirements and infrastructure. Optimized for Nigerian networks.

HOW IT WORKS

1. **Sign Up & Verify**
   Create your account and complete identity verification for secure access.
2. **Initiate Transfer**
   Upload your file or initiate your financial transfer through the secure platform.
3. **Secure Delivery**
   Recipient receives a secure, encrypted access link with controlled permissions.
4. **Complete & Clear**
   Transfer completes with full encryption. Data cleared after delivery.

PrivateTransfer

Feature Breakdown & Details

privatetransfer.ng

FEATURES

End-to-End Encryption
Military-grade encryption protects every transfer from initiation to delivery.

Secure File Sharing
Share sensitive documents with confidence. Controlled access, no unauthorized viewing.

Private Financial Transactions
Transfer funds with privacy guarantees that standard banking channels don't provide.

Identity Verification
Know who you're transacting with. Built-in verification for both parties.

Full Audit Trail
Complete record of every transfer for compliance and accountability.

Access Controls
Set permissions, time limits, and access restrictions on every transfer.

Expiring Links
Transfer links auto-expire after delivery or after a set time period. No lingering access.

Mobile-Responsive
Works seamlessly on any device — desktop, tablet, or phone.

WHO IT'S FOR

- Businesses handling sensitive financial or legal data
- Financial institutions requiring secure inter-party transfers
- Legal firms sharing confidential client documents
- Healthcare organizations transferring patient information
- Government agencies needing secure communication channels
